

DECO6500 · ADVANCED HUMAN-COMPUTER INTERACTION · SEMESTER 2, 2026

Week 7 Applied Class

Make Sense of the Evidence

First, thirty-five minutes on how your team has worked. Then you set the pace, and we come to you.

Acknowledgement of Country

The University of Queensland (UQ) acknowledges the Traditional Owners and their custodianship of the lands on which we meet.

We pay our respects to their Ancestors and their descendants, who continue cultural and spiritual connections to Country.

We recognise their valuable contributions to Australian and global society.

The Brisbane River pattern from A Guidance Through Time
by Casey Coolwell and Kyra Mancktelow.

Commitment to Diversity and Inclusion

Diverse perspectives, abilities, experiences and backgrounds inspire creativity, encourage innovation and enrich our communities.

Members of our broad community are valued and respected for their individuality.

UQ strives to create a culturally safe, welcoming and inclusive workplace, with strong community connections and partnerships.

FIRST · 0:10 – 0:50

The Mid-Project Team Review

Every team, at the same time, before any of the analysis work. Thirty-five minutes on how you have actually worked since Week 5 — and what changes for the last two weeks.

One Question: How Have We Actually Worked?

Before you start · 2 min

- A facilitator who has not run a team meeting yet.
- A scribe who writes into AnTS as you go — not afterwards.
- Open: your Working Agreement, your AnTS record since Week 5, the five behaviours.

The rule

- Observations, not labels.
- “Sam is unreliable” ends a conversation.
- “The last two commitments weren’t completed and we didn’t know until the deadline” starts one.

Everyone speaks in every block

- The facilitator’s only job is to make sure that happens and keep the time.
- Tutors walk and listen. Ask if you want one; otherwise they stay out of it.

This is the assessed teamwork event of the week. It is recorded in AnTS, and the record is what makes it visible — a review that lives only in the conversation is invisible by Week 8.

The worksheet: Weekly Learning → Week 7 → “The team review worksheet” (.docx, two pages). Have it open.

This week’s teamwork focus: contributing reliably under pressure, and managing changes and gaps. If you run short of time, do that one properly and the other four briefly.

Five Blocks. The Scribe Writes All the Way Through.

1

The round · 8 min Each member, ninety seconds, uninterrupted: what I committed to since Week 5; what I delivered; whether the team knew in time when something changed.

2

The five behaviours · 10 min For each: one moment the team did it well, one where it broke down — a date, a session, a file, a message.

3

The working agreement against reality · 7 min Clause by clause: held, bent, or never tested. What did three weeks of evaluation need that it does not cover? Amend it in AnTS.

4

Weeks 7 and 8 · 7 min What remains, with a name and a date on each: sessions, transcription, coding, the four quantitative steps, integration, the notebook.

5

Record it · 3 min Meeting · decisions with reasons · tasks with owners · agreement amendment · who is away. Checked before you move on.

Finished early? Check the AnTS record is complete, then organise your data quietly. Nobody opens the tools before 0:50.

0:10 – 0:50 · EVERY TEAM · WE WILL CALL THE BLOCKS

THEN · 0:50 ONWARDS

Now the Evidence

Where the week sits, what was covered on Tuesday, where the rest of it lives, and the work for the afternoon. All of this is on the Week 7 page — this is the quick version.

WHERE WE ARE IN A2

Evaluate Is Finishing. Analyse Is Beginning.

YOU ARE HERE

Evaluate · this week

- Sessions run. Recordings, notes and measures de-identified and in the Team SharePoint folder.
- Every deviation from the plan logged as it happens.

Analyse · starts today

- First-pass coding in NVivo.
- The four quantitative steps in the Colab notebook.
- The claim-strength check: Week 5 claims against the evidence.

Integrate · Week 8

- Numbers and talk brought together. Claims bounded. Notebook and individual explanations complete.
- Only works if both strands are started by Monday.

A2 is due Tuesday 22 September. Today is for starting — do not wait for your last session before coding your first transcript.

WHERE TEAMS ARE

Three States. Work For Every One Of Them.

SESSIONS FINISHED

Analysis-ready

- Sessions done or nearly done.
- Organise and de-identify; then the real tools on your own data.
- Qualitative: NVivo videos → first-pass coding.
- Quantitative: two videos → four steps, to the end of step 3 today.
- Claim-strength check.

SESSIONS STILL RUNNING

Mid-collection

- Some sessions still to run.
- Organise what exists; transcription decided and started.
- Build the CSV so step 1 is ready the moment the last session is in.
- Learn both tools on the sample data.
- Log deviations so far.

NO SESSIONS RUN

Not yet evaluating

- Tell a tutor in the first fifteen minutes.
- A compressed plan agreed in the room: fewer sessions, earliest dates, within-cohort recruitment authorised as the fallback.
- Written into the notebook with owners and dates.
- Then both tools on the sample data.

Whatever state you are in, there is work for you today. Do not queue for a tutor — keep working; we come to every team.

The Type Follows From the Question

In-context use

Inductive

How the intervention fits, or fails to fit, into what people already do. No framework anticipates a particular person's routine, so codes are built up from the data.

Usability

Deductive · Nielsen or Norman

Whether the interface could be perceived, understood and operated. Code against a framework of known breakdowns — Nielsen's heuristics by default; Norman's principles when the question is about discoverability or the user's model.

Experience

Deductive · PACE+W

What happened to and for the person while using it. Code against the course's model of the human, so every team reports experience in the same terms.

Inductive: codes come up from the data

Strength: sees what no framework named. Risk: codes that are topics rather than events, and a codebook that drifts between coders.

Deductive: codes come down from a framework

Strength: comparability and a shared language. Risk: force-fitting — reading everything as an instance of the framework and missing what it does not name.

Codes, not themes, this week. Every deductive codebook gets one extra top-level code: "does not fit the framework". A second coder on a few pages, and compare.

PACE+W — The Course's Model of the Human

Dimension	What it covers	What it looks like in the data
Perception	Taking in and de-coding information — seeing, hearing, reading, recognising what something is. Includes the effort of de-coding itself.	Misreadings; re-reading; not noticing an element; asking what something is; slowing at dense text; relying on colour or position rather than words.
Action	What the person does and can do — the motor and procedural side.	Errors and slips; repeated attempts; hesitation before acting; workarounds; abandoning a step; physical difficulty with a control.
Cognition	Attention, memory, understanding, reasoning, deciding. The person's model of how the system works.	Wrong predictions about the system; forgetting where something was; working out a rule; asking "so does that mean..."; deliberate strategies.
Emotion	The felt response in the moment — frustration, relief, embarrassment, delight, anxiety, boredom.	Tone and exclamations; self-criticism; laughter; sighing; apologising to the facilitator; visible relief on success.
Wellbeing · hedonia	Pleasure, comfort, enjoyment, ease. Whether it was a good experience in the plain sense.	Spontaneous positive remarks; wanting to keep going; "pleasant", "calm", "satisfying" — or tiring, tedious, stressful.
Wellbeing · eudaimonia	Meaning, growth, functioning well as a person. Through self-determination theory: autonomy, competence, relatedness.	Autonomy: control, choice, dignity given or taken. Competence: feeling capable, learning, mastery. Relatedness: connection to others, or isolation.

Hedonia is whether it felt good. Eudaimonia is whether it helped the person be more themselves — more in control, more capable, more connected. A system can score well on one and badly on the other.

THE PART TUESDAY DID NOT FINISH

The Numbers: Two Videos, Then Four Steps

WATCH FIRST

1 · Descriptive statistics — the background (55 min)

Part 2 of the lecture, slowly, with examples: what kind of number each column is, the four rules, the two questions, the four tools.

THEN THIS — BEFORE THE NOTEBOOK

2 · Quantitative analysis in four steps (33 min)

One slide per step, then the notebook on the sample data, then what to write. Have the notebook open in another tab.

1

Structure your data One row per participant, de-identified; the two definitions written; column map edited and checked. §1–§3

2

Describe the people Counts at each value of every person variable — the interviewed six beside the whole group. §3

3

Outline your results Counts with n ; medians with every value plotted; SUS/TLX scored; Likert as counts. A notes cell after each. §4–§7

4

Explore association and difference Only the pairs decided in advance. Plot first. Spearman by default. Two groups only. §8–§10

How far today: to the end of step 3 with the notes written. Step 4 only if the decided-in-advance cell exists. The notes are the analysis.

The Order That Matters

- | | | |
|---|-------------------------|---|
| 1 | EVERY TEAM | Organise and de-identify the data — everything in the Team SharePoint folder, IDs not names, one key file; transcription divided and started; the CSV built; the two definitions written. |
| 2 | QUALITATIVE | First-pass coding in NVivo — setup page, then the videos; one transcript, a codebook with “does not fit”, a second coder on a few pages. |
| 3 | QUANTITATIVE | The four steps in the Colab notebook — videos first; sample data, then your own CSV; to the end of step 3 with notes. |
| 4 | ANY DATA | Deviation log and claim-strength check — every departure from plan, dated; beside each committed question, the Week 5 claim and the claim the evidence now supports. |
| 5 | BEFORE YOU LEAVE | Record it — notebook, AnTS, and the tools: notebook and NVivo project downloaded to the team folder with today’s date. |

Ahead of all this? The claim-strength check for every question, then the systemic question register — what the evidence has raised that A2 cannot settle.

BEFORE ANYTHING TOUCHES A TOOL

What May Go Where

THE RECORD

Team SharePoint folder

- Everything: recordings, notes, transcripts, spreadsheets, consent forms.
- The one key file linking IDs to people — and nowhere else.
- The link is on your AnTS Overview page.

THE TALK

NVivo · Digital Workspace

- De-identified transcripts only.
- Nothing to install; log in through my.uq.edu.au → UQ Digital Workspace.
- One project per team, saved where the setup page says.

THE NUMBERS

Colab

- The de-identified CSV of numbers only — IDs, outcomes, times, errors, scores, demographics.
- Never transcripts. Never recordings.
- Personal Google account; save your own copy of the notebook.

Transcription runs on your own computer or in UQ-provided Word — never a consumer web transcriber. De-identify as you go: P01, not a name, in file names, transcripts and spreadsheets.

Voice recordings are inherently identifiable. They stay in SharePoint and are never uploaded anywhere else.

BEFORE YOU LEAVE

Six You Cannot Leave Without

Team review recorded in AnTS

From the first block: meeting, decisions with reasons, Weeks 7–8 tasks with owners, agreement amendment, absences.

Data de-identified and in the team folder

IDs not names; one key file; transcription divided and started.

Both tools opened, videos watched

NVivo through the Digital Workspace; the two quantitative videos; the notebook run through step 2 at least on the sample.

First codes exist (teams with data)

One transcript, tied to a committed question, with a second-coder comparison.

Steps 1–3 run with notes (teams with data)

On your own CSV; notes cells written; notebook downloaded to the team folder with today's date.

Deviation log and claim-strength check

Every departure from plan, dated. Beside each committed question: Week 5 claim, and the claim the evidence supports.

Teams without data: a compressed evaluation plan with dates, owners and the authorised fallback, in the notebook — agreed with a tutor today.

What You Should Be Working On

WHATEVER STATE YOU ARE IN

Every team

- Organise and de-identify — Team SharePoint folder, IDs not names, one key file.
- Transcription divided and started.
- The CSV built; the two definitions written.
- Deviation log, dated.
- Claim-strength check beside each committed question.
- Before you leave: notebook, AnTS, and the tools downloaded to the team folder.

RESOURCES → NVIVO PAGES

Qualitative strand

- Getting Set Up with NVivo — four steps, Digital Workspace.
- Using NVivo — video 1 (getting started).
- Import one transcript; read it through once.
- Codebook: PACE+W or Nielsen/Norman, plus “does not fit”.
- Code one transcript. Codes, not themes.
- Second coder on a few pages; compare; tighten definitions.

RESOURCES → COLAB PAGE

Quantitative strand

- Video 1: the background (55 min).
- Video 2: four steps (33 min).
- Step 1 · Structure your data
- Step 2 · Describe the people
- Step 3 · Outline your results — with the notes cells written
- Step 4 · Association and difference — only if decided in advance.

No data of your own yet? Both tools run on the sample data from the lecture. No sessions booked? Tell a tutor now, not at the end.

Course website → Weekly Learning → Week 7 has every link. Do not queue for a tutor; keep working and we will get to every team.

LAST TEN MINUTES

One Sentence, To The Room — Then Before Week 8

**What your first pass has found –
or when your sessions run.**

Before the Week 8 applied class — the tasks with your name on them in AnTS

Sessions

Finish them; log every deviation as it happens; recordings into the team folder the same day.

Transcribe and code your share

De-identifying as you go; against the codebook you agreed today.

Finish the four steps

On your own CSV, if today only got you to step 3 — and write the notes. Watch the background video if you only had time for the four-steps one.

Week 8 is integration

Numbers and talk together; claims bounded; notebook and individual explanations complete.

A2 is due Tuesday 22 September. Both strands started by Monday is what makes Week 8 possible.
